Call for proposals regarding
collaboration regarding the use of a
biomass thermal power plant of 4.6
MW capacity

2017-03-24 07:26:25

The Administrator of Bioenergy Farm Stanowice Sp. z o.o. w restrukturyzacji calls for cooperation proposals regarding the use of a biomass power plant with a thermal capacity of 4.6 MW and a power generation capacity of 0.9 MW as well as a low temperature belt dryer.

The company is looking for business partners in the following areas:

- drying of agricultural and food industry raw materials,
- manufacture of DDGS feed ingredients, GMP+ standard brewer's spent grain, etc.
- use of heat for other purposes (pellet production, greenhouse cultivation, refrigeration, and food storage).

At present, the plant is designed to produce high-protein feed ingredients from agri-food industry by-products, e.g. distiller's grain, brewer's spent grain. However, its production can be realigned.

The plant has a Stela low-temperature belt dryer. Belt surface: 99 sqm. Drying temperature range: 80/60°C. A granulation line with a capacity of 2,5 tons/h, and 3 silos with a capacity of 115 m³ each.

Commissioned in 2016, the plant is located near Gorzów Wielkopolski, Lubuskie Province, close to logistics hubs in Kostrzyn and Słubice, the A4 motorway, the S3 expressway, and 100 km from the seaport in Szczecin. Additional investment areas are available in the vicinity as well as additional warehouses. For more information see the technical and photographic documentation of the plant.
